Digital Literacy

Project Report

Name: Chakshul Kedia

Registration Number: 25BCE11242

Branch: Computer Science and Engineering

Year: First Year B. Tech

Course Code: CSE0001 - Digital Literacy

Introduction:

This project report is an account of my work as a Student Digital Ambassador in the context of the CSE0001 Digital Literacy course. The ultimate aim of this project is to successfully operate in the digital world and produce resources to assist my peers in doing so as well. As digital presence and safety become more and more important aspects in the academic life of students, this portfolio provides an overview of the application of digital literacy in five significant aspects. During this project, I have concentrated on developing an awareness infographic, developing a professional digital portfolio, exploring coding and collaboration sites, developing professional email etiquette, and exploring cybercrime prevention strategies. With this project, I hope to enhance my own and my batchmates' ability to utilize digital platforms in an effective manner.

Task 1 Write-up:

I have created a one-page infographic on the topic of Digital Literacy using Canva. The aim of this design is to provide knowledge on the meaning of digital literacy and highlight the importance of this topic in the lives of students. I have included various aspects of digital literacy, such as the importance of safe internet usage, appropriate behavior on the internet, digital communication, and the importance of creating a professional image on the internet. The design is simple and easy to read, with various icons used to make it more attractive.

I have learned through this task that digital literacy is not just about using a mobile phone or computer, but it also involves knowledge of internet safety, productive use of technology, and appropriate behaviour on the internet. The most difficult part of this task was to organize the content in a neat and attractive way without making it look cluttered. This activity has helped me learn the importance of visual communication in remembering and communicating the content to others.

Task 2 Write-up:

For this task, I had to create and update my profiles on various digital platforms, including GitHub, LinkedIn, and another professional or academic platform. All of these platforms have their own significance for a student's life. For example, GitHub can be used for storing projects, codes, and other technical work. LinkedIn can be used for developing a professional identity and making connections with other students, teachers, and professionals. Other platforms, such

as Kaggle, Stack Overflow, and ResearchGate, can be used for learning, problem-solving, and exposure to other academic and technical work.

This task helped me realize the significance of building a digital portfolio from the very beginning of college. In the coming four years, I can use GitHub for uploading my projects and improving my technical profile. I can use LinkedIn for building a professional identity and learning about internships and other career-related work. I can also use other platforms for improving my learning and exposure to other real-world issues. This task helped me realize the importance of a good digital profile for both academic and professional growth.

Task 3 Write-up:

In this task, I had the opportunity to try out a coding practice website and a collaboration tool from Google Workspace. For the coding practice, I chose a coding practice website, which is easy for beginners, and attempted an introductory coding challenge. This not only made me confident about solving coding problems online, which can be an asset for internships or placement purposes, but also made me aware of the importance of logical thinking, coding, and other relevant skills through regular practice. Moreover, it made me familiar with the style of coding assessments, which can be an asset for future internships or placement purposes.

For the second part, I had to create a Google Form with five questions, including multiple-choice and short-answer questions, with the title "Digital Literacy Awareness Quiz." I also had to view the corresponding Google Sheet. This made me aware of the potential of digital tools not only for learning purposes but also for information collection, organization, and analysis. From an academic perspective, both tools will be extremely helpful for assignments, quizzes, group activities, and skill development. This task made me realize the importance of both coding practice and digital tools, especially for students.

Task 4 Write-up:

Poor digital communication may lead to misunderstandings, confusion, and even harm a professional relationship. For instance, a student may send an email to a professor without a proper subject, greeting, and a detailed explanation of the problem. This may lead to a poor impression of the sender, and the email may not receive proper attention. In a professional environment, such as an academic setting, the form of communication may be as important as the content.

This task has helped me understand the importance of writing emails in a polite, structured, and professional manner. This has also helped me consider the importance of responsible communication in social media, where careless communication may harm a person's image. This problem may be prevented by using proper communication through a respectful tone and ensuring that the purpose of communication is clearly explained. This task has helped me realize the importance of good digital etiquette for building trust and being professional.

Task 5 Write-up:

While conducting research on identity theft, I was surprised by the fact that people could easily fall victims of identity theft if they are not cautious enough when they are online. A simple act of clicking a fake link or entering information in an unreliable site could cause an individual to fall into the hands of thieves, and they could end up using the individual's identity to carry out criminal activities. Students are also victims of identity theft because they are the ones who are mostly online.

This task has made me more aware of the importance of online safety and privacy. A change that I am going to make is that I am going to be more cautious before clicking any links or disclosing any of my information online. I am also going to use more advanced passwords and other security mechanisms such as two-factor authorization. From the task, I have learned that cyber awareness is very crucial in the current world and that it could help prevent serious problems such as identity theft.

Conclusion:

Overall, this Digital Literacy project has greatly enhanced my understanding of the online world and how I can safely and professionally interact with it. I have realized that being digitally literate is not just about knowing how to use a computer, but it also involves thinking, data management, and communication. The technical experience of creating a GitHub repository, as well as the experience of using Hacker Rank, helped me greatly, as did the email etiquette and cybercrime awareness projects. I feel I can confidently be a Digital Ambassador, utilizing this basic knowledge for my own safety and success throughout my future academic career.
